Introduction

BLMP Application helps to track the project in various of the project from the bidding to installation and walk-through process. This application have various processes like [Receiving](#), [Picking](#), [Pulling](#), [On-Site Receiving](#), [Installing](#) and [Walkthrough](#) process based on Project you create with the application to handle furnitures which are needed to a room in a hotel. This application also include reports like Floor Wise Shortage, Room Wise Shortage and Profitability Report based on

data we have generated in a project.

This documentation explains various process developed in this application and walk-thought the each stages of process from the bid creation to completing the walkthrough process.

Accessing This Application

BLMP Application can be accessed by users in two different modes, either as application user or customer portal user. Customer Portal mode will have only access to specific module of the application with read-only access. Customer or Agents are given access to the application via customer portal to check on the progress of project in which they are involved. Regular employee like Project Manager, Project Coordinators and Warehouse Staffs will have access to application as Application User.

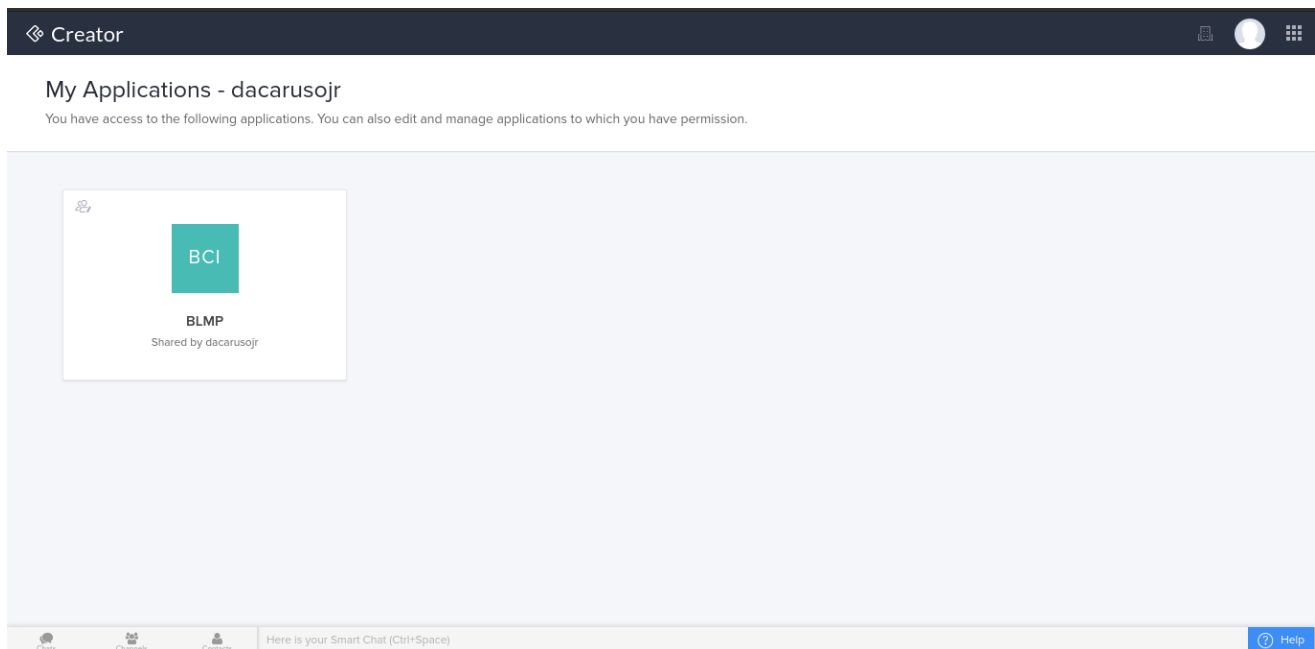

Image 1: Zoho Creator Application Dashboard

Application User

Application User can gain access to the application when application admin or project manager add them as user in the BLMP application. Once a new user is added to the application a email invite will be sent to given user's email address.

To access BLMP application from Zoho Creator Dashboard go to [Zoho Creator login page](#) and login into Zoho Creator account your user name password. For more details refer this [Zoho Creator documentation](#).

According to BLMP application user can also be able added as user by adding a employee into the application. This process is explained in detail under [Settings > Employees](#) section.

Customer Portal User

Customers can given access to application via Zoho Creator Customer Portal. Customer can login to the application from [Customer Portal Login Page](#). Once logged in they will be having access to projects in which they have added as contact as shown in *Image 2*. Granting access to customer portal to customer portal will be explained in details in [System Setting → Contacts](#).

Image 2: Zoho Creator Customer Portal project list

Note: If you added a user to customer portal with email id domain same as app admin Zoho Creator will allow this email as customer portal user. This email can only be added as application user instead.

Example:

App Admin Email: admin@bceworldwide.com

Lets assume we are trying to added user3@bceworldwide.com or staff@bceworldwide.com as user in customer portal. It is not possible, the customer portal email should be anything other than **@bceworldwide.com** in place of domain name like user2@holidayInn.com or user2@gmail.com or customer@xyzhotel.com can be added to customer portal as user.

Bids

Bids are feature in BLMP application to maintain details of the Bids BCI is participating. This feature allows to store various details like basic details like Project Name, Customer, Contact, Lead Source and files related receptive bid as shown in *Image 3*. Bid also includes feature adding the project pricing along with a pricing approval process as shown in *Image 4*.

Add Pricing before sending for approval

Image 4: Approved Project Pricing under Bid details page.

Bid Creation

We can able to create a Bid in the application by providing some basic regarding the bid as shown in Image 3. We can start the Bid creation process from Bids → Pricing → Click on Plus Button as shown in below Image 5 . Once the button is clicked it will open a form to collect information regarding the bid as shown in Image 6, Once details are filed in and click on Submit a bid will be created in the application and redirected to Bid Pricing.

Note:
Before creating a bid in application customers and contacts needed to be created in customers module. If the customer already exist, the existing customer can be reused. We have explained the customer and contact creation in Customers Section.

Bid Pricing

Bid pricing is a feature used in the application capture your bidding amount over a project/tender. We can also add estimate of pricing split-up of various expenses which you may have on various resources and services which are going to be offering to the customer as *Buy Amount* and *Sell Amount*. The page shown in *Image 15* will be shown immediately after a bid is created. You can click on *Add Price Type* button to add a new price type into new or existing bid you have created. Form shown in *Image 16* will be opened to collect the price type, sub type and pricing information. While adding price types to a bid, new price type or sub type can be created from the bid from itself.

Bid Approval

In bid approval process once bid pricing is completed, The bid can be sent for approval to based on hierarchy. In BLMP Application we have two hierarchy, Bid Creator and Bid Approver. Users under Bid Creator and Bid Approver both have access to create, edit and delete a price type in bid pricing process. But the Bid Approver have privilege to approve or review the bid pricing submitted by Bid Creator as shown in *Image 18*.

Image 18: Bid Pricing after submitting for approval of Admin Approver

You can notice in the status of *Bid Pricing* is update to *Submitted* from *New*. At this stage users in admin role will not have access to add, modify or delete a price type (i.e., Admin will only have read-only access once submitted for approval). Now users under Admin Approver role will access create, edit or delete access to price types added by Admin user. Apart from this they have privileged to *Approve* a pricing submitted or send it back for *Review* using the *Approve* or *Review* button shown in above *Image 18*.

If *Admin Approver* approves the pricing, the bid approval process will be completed and the bid pricing will be locked no more modification in pricing can be done by both the roles.

Bid to Project Conversion

Once a Bid Pricing is approved and win, Bid created can be converted to project directly. You can go to *Bids* → *Approved* → *Edit* and update the *Stage* of bid to *Win*. Once the bid status is selected the application will show few more field like Project Owner, Employees, Hotel, Warehouse, etc as shown in *Image 21*. Once all those details where given you can click on submit to convert a Bid to a Project and wizard will be opened automatically get gather few more information to setup the project, We have covered this in detail in [Project Wizard](#) section . Following are the field description of the project fields.

Field Name	Field Description
Project Owner	BCI Employee who is going to be point of contact between BCI and Customer.
Employees	Employees with different roles involved in this project. Only user who needs application access is sufficient.
Hotel	A Hotel model needed to be created. Will holds the information of building and floor we are going to work on this project
Warehouse	Warehouses going to be used in this project for storing he furnitures.
No of Rooms	Number of rooms involved on this project
No of Room Types	Number of room types involved in this project.

Image 22: Furniture Upload - Project Wizard.

Furniture Upload

Furniture Upload tab will allow you to upload/import furniture into a project. You can use the *Import Data* feature available in the report shown in Image 22. For import the data into this report data should be available as a CSV (Comma Separated Values), XLS or XLSX format with following columns listed in the following Table 2.

Column Name	Data Type	Description	Mandatory	Unique
Project_Code	String	Unique project ID assigned to a project you are currently working on. Note: Each furniture row in the sheet should have project code value.	True	False
Furniture_Name	String	Name of the furniture you have importing into project.	True	False
Item_Code	String	Unique furniture code of all furnitures you are importing into application. Note: Case Sensitive.	True	True
Description	String	Detailed description of the furniture	False	False
PO#	String	You can adding the PO number from which you expect to receive this furniture.	False	False
Vendor	String	Name of the furniture vendor.	False	False
Project Quantity	Number	Quantity of the given furniture needed for this project.	True	False
Storage Type	String	Storage Type	False	False

Table 2: Furniture upload data column description.

Note:

In BLMP application, If a furniture, room type or room created or imported to a project it will associate with that project only. This furniture, room type or room will not be accessible from other project in the application. Though, User have access to multiple project in the application.

Image 8: Customers List Report.

Contacts

Contacts module is similar to customer module allows to store basic information of person how is going to representative of the customer. Customer module also serves as a place where we can enable or disable access of [Customer Portal](#). We can create contact in application from *System Settings* → *Contacts* → *Click on Plus Button*.

Note: Customer should be created first in order to add create or associate a contact to customer. As mentioned in customer section contacts can be created from customer module itself.

Image 9: Contact Creation Form.

If the customer field is selected while creating a contact. The system will automatically associate the created contact with respective customer in Customer module as sub-form line item.

Granting and Revoking access to Customer Portal

As mentioned in the introduction of the contact module, This module can also used to manages access to customer portal. If a contact is not give customer portal access yet you can field an option called *Grant Customer Portal Access* in *System Settings* → *Contacts* as shown in *Image 10*. Once this button is clicked a email invite will be sent to respective email ID added to the contact. Once customer have accepted the invite they have read-only access to the project to which they have added as contact.

Image 10: Granting customer portal access from Contact module.

If customer is already given access to customer portal *Grant Customer Portal Access* action will not be available any more. Instead you can find a option called *Revoke Customer Portal Access*, This option allow to revoke access given to customer portal for a given customer as shown in *Image 11*. You can also use *Is Customer Portal Active* column to check a contact is having customer portal access or not.

Note:

- If customer didn't get invite mail in inbox ask them to check in spam or trash once.
- Invalid email ID may be another reason why invite was not sent.
- Maximum number of customer portal user may have reached.

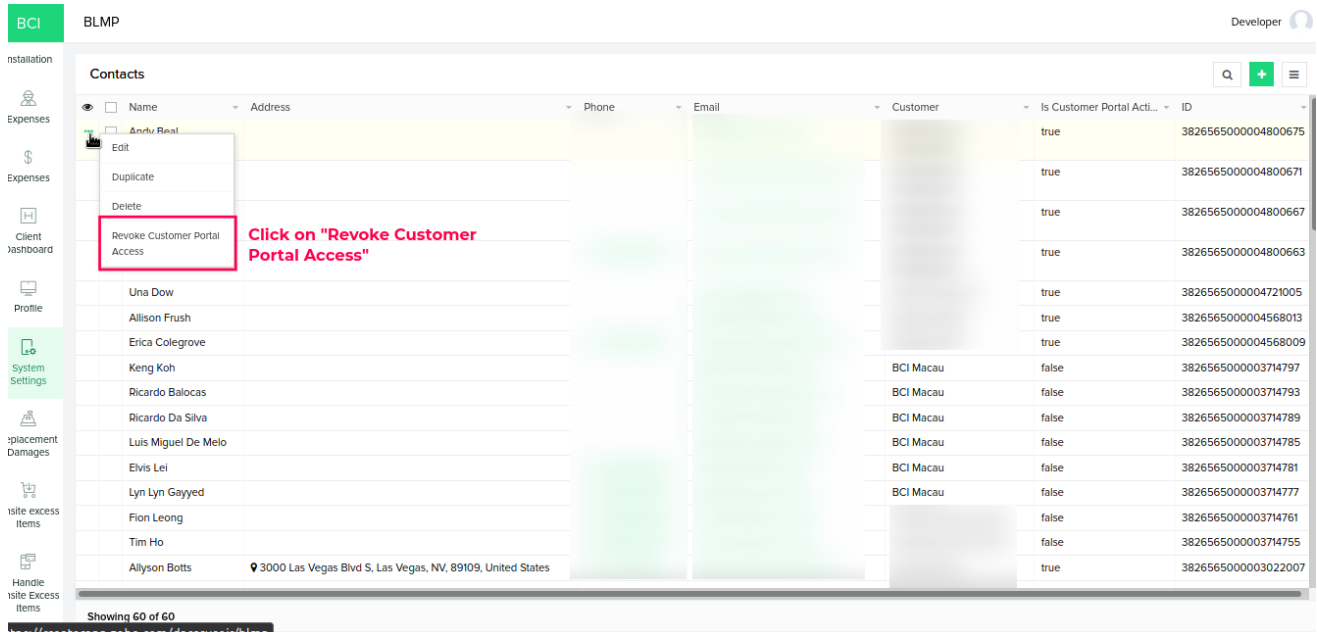

Image 11: Revoking customer portal access from Contact module.

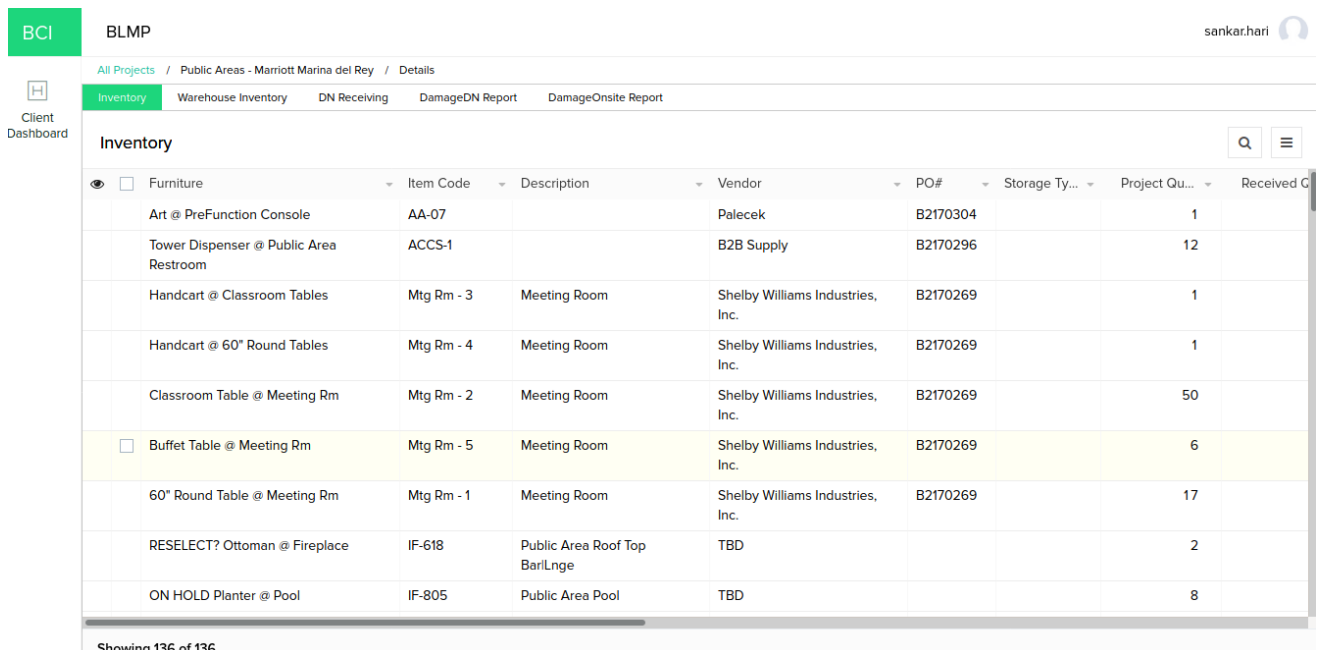

Image 12: Customer project detail view

We will discuss regarding the customer portal module in details under [Customer Portal](#) section. For information you can also refer to this [Zoho Creator Documentation](#).

Employees

Employees are application users, These are who is going play various roles in the BLMP Application like Project Manager, Project Coordinator, Warehouse Staff, etc. Based on the roles under which a employee is getting added, the some of modules access will be restricted. For Example, Let us assume we are adding a user under Warehouse Manager Role. He/She will be access to module that are specific to warehouse handling like Overall Inventory, Warehouse Inventory, Warehouses, Picking, etc.

We have used Zoho Creator's roles and permission features to grant or restrict access to various modules of BLMP Application. To know more about the roles and permission please refer this [Zoho Creator Documentation](#)

You can add a new employee to the application from *System Settings* → *Employees* → *Add new Employee* button as shown in the *Image 13*.
